SUMMARY

DevOps Engineer with 1.5+ years of experience in CI/CD, GitOps, cloud (Azure, AWS) and observability. Migrated 150+ Jenkins pipelines to GitHub Actions and Octopus Deploy, hardened GitHub Actions across 40+ repositories, and built Grafana monitoring and security dashboards used by multiple product teams.

EXPERIENCE

DevOps Engineer | EG A/S | Apr 2025 – Present

- Migrated 150+ Jenkins pipelines from multiple external tenants into the EG tenant, rebuilding them as GitHub Actions workflows integrated with Octopus Deploy.
- Moved Jenkins cron jobs to PowerShell scripts scheduled on VMs (long-running jobs) or GitHub workflows, so limited self-hosted runner capacity no longer queues and blocks other workflows.
- Built development environments on Azure (VMs, databases, domain names) with Octopus Deploy for 2 teams blocked by GDPR and technical constraints.
- Automated Kubernetes config and secrets deployment with FluxCD for one team; rolling out to other teams.
- Pinned GitHub Actions to commit SHAs across 40+ repositories for 7+ teams, using Dependabot and AI-assisted tooling (Claude) to automate updates, with each PR reviewed before merge.
- Developed an over-the-air (OTA) update solution on AWS (S3, API Gateway, ECS) to replace Microsoft CodePush, retired with Visual Studio App Center on March 31, 2025; currently in dev testing.
- Built Grafana dashboards using the Checkmarx API to give product teams easy access to security scan results, as the Checkmarx UI is hard to use and not all team members have access.
- Configured OpenTelemetry with tagging to filter Grafana dashboards by product, so teams see only their own product's data.
- Built Grafana dashboards monitoring 6 VMs as part of the central observability setup, with CPU threshold alerts to each owning team's Microsoft Teams channel, so VM issues are no longer discovered only when a website goes down.
- Maintain CI/CD pipelines, repositories and services across 6 environments using Docker, Kubernetes and Prometheus, with SonarQube and Checkmarx scanning; help run the team's Kanban iterations.

Junior Data Analyst | Kiyaan Infotech Link | Nov 2022 – Nov 2023

- Analyzed customer behavior data with SQL to support data-driven marketing campaigns and product targeting.
- Built 4+ Tableau and Excel dashboards and 2 quarterly reports that helped stakeholders track data trends.
- Collaborated with cross-functional teams and took part in scrum ceremonies (sprint planning, standups, retrospectives).

SKILLS

CI/CD & Automation: GitHub Actions, Jenkins, Octopus Deploy, FluxCD (GitOps), Git workflows & branching
Cloud: Azure, AWS
Containers & Orchestration: Docker, Kubernetes
Monitoring & Code Security: Grafana, Prometheus, OpenTelemetry, SonarQube, Checkmarx
Scripting & Languages: PowerShell, Bash, Python, SQL, Java, C++
Data Visualization: Tableau, Power BI, Excel

CERTIFICATIONS

AWS Cloud Practitioner Essentials | Google Data Analytics | Google Project Management | Getting Started with Python | Cloud Computing Basics

EDUCATION

Master of Computer Applications | St Aloysius Institute of Management & Information Technology
Bachelor of Computer Applications | Raja Lakhamagouda Science Institute
